

Permission To Access Letter

The Hualalai Community Association has contracted with a coqui frog control vendor to find and remove coqui frogs throughout the community. We will be using various methods to eradicate the coqui frog population including soil amendment, citric acid, and hand capturing coordinated with the homeowners, and property managers.

If your property has debris below the bushes and trees or overgrown plants, you will need to notify your landscaper to address the debris and overgrown areas in order for the coqui frog division to be effective. Spraying the areas necessary will happen between the hours of 2 pm and sunset weekdays only, while the coquis are at ground level. We will notify homeowners or property managers at least 24-48 hours in advance prior to spraying.

After initial treatment, follow up by listening for calling males. Subsequent sprays may be needed for frogs that were missed (females, juveniles, recently-hatched froglets, those that sought shelter from direct contact with the spray either). If there were eggs or juveniles that did not come in contact with spray, there could be another batch of calling males in about six to eight months, and a follow-up spray application.

We are asking for permission to access your property to do some coqui recon and treatment, specifically on Laueki St.

Any information regarding coquis, reporting coquis, or requests for coqui services please contact me directly.

Mahalo for your help getting the coqui frog population under control.
